

EMI-One SE – the next, all new generation of the EMI-One controller

Thoughtfully redesigned – inspired by experience

We are excited to introduce the new generation of EMI-One controllers: the **EMI-One Second Edition**, based on user experience and our conclusions.

Key benefits of the new generation :

- Power redundancy

An additional power socket that allows to power the device from 2 separate power sources for power redundancy.

- Dedicated electronic handle sockets

Easier and faster integration of access control solutions thanks to adding 2 RJ45 sockets used to connect electronic handles also with built-in RFID readers from the apra EMI-Lock family as well as EMKA Agent E handles and third party manufacturers.

- Encrypted communication via HTTPS

Controlling, reading, and configuring the device settings using a transparent interface through a web browser interface is now possible via an encrypted and safe connection in the TLS 1.2 standard which increases the overall system safety.

- Support of EMI-POWER Smart Ready-Link PDUs

WARNING! The EMI-One controllers are only available until stocks last!
All new orders will include the new EMI-One SE controllers.
